Generates AsciiDoctor files to document Ecore metamodels, similar to JavaDoc. AsciiDoctor can be rendered as HTML, PDF, or Eclipse Help. EcoreDoc can be used as Maven Plugin, standalone command-line tool, or as Java API.

## 1. Overview

EcoreDoc's Java API works on a list of EClassifiers. Maven Plugin and Standalone Command-Line Tool take all EClassifiers from one or more \*.ecore or \*.xcore files.

EcoreDoc creates one output document containing all passed EClassifiers. They are grouped by containing EPackage. The output document contains documentation, all properties of supported elements, and cross-references to all usages of each element.

EcoreDoc currently supports the following elements:

- EPackage
- EDataType
- EEnum
- EEnumLiteral
- EClass
- EAttribute
- EReference

EcoreDoc is highly configurable via the Generator Configuration.

The homepage and repository of EcoreDoc can be found at https://gitlab.manatree.io/MDEAssets/EcoreDoc. Please use the issue tracker at this site for any feature requests or bugs.

## 2. Java API

The Java API is available as Maven artifact com.altran.general.emf.ecoredoc:com.altran.general.emf.ecoredoc.generator or OSGi bundle com.altran.general.emf.ecoredoc.generator.ebr.

The Generator Configuration is contained in Maven artifact com.altran.general.emf.ecoredoc:com.altran.general.emf.ecoredoc.generator.config or OSGi bundle com.altran.general.emf.ecoredoc.generator.config.ebr.

The main interface is com.altran.general.emf.ecoredoc.generator.EcoreDocGenerator. The constructor takes the list of EClassifiers to generate documentation for.

The getConfig() method returns a fully initialized
com.altran.general.emf.ecoredoc.generator.config.EcoreDocGeneratorConfig that can be changed to
adjust the Generator Configuration.

The generate() method returns a CharSequence containing the complete AsciiDoctor output document.

# 3. Maven Plugin

The Maven Plugin is available as Maven artifact com.altran.general.emf.ecoredoc:ecoredoc-maven-plugin.

It supports the following configuration settings:

### inputFiles (required)

The list of Ecore metamodel files to create documentation for.

## outputFile (required)

The output file to write the generated AsciiDoctor document to. By convention, the file extension is .adoc.

If the file exists, it will be overwritten and a warning is emitted.

### resolve (default: false)

Whether EcoreDoc should explicitly try to resolve all references in the *inputFiles*. Might be necessary for highly interconnected metamodels.

### config (default: unchanged default config)

Customized Generator Configuration.

The *config* contents stricly follow the structure and naming relative to Class EcoreDocGeneratorConfig, easiest explained with an example.

Assume the *inputFiles* contain two EPackages, namely EPackage1 and EPackage2.

EPackage1 contains, among others, two EClasses, named MyEClass and Class3. The latter one contains, among others, the EAttribute named specialNumber.

EPackage1 also contains an EEnum named Enum1.

### pom.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<project xmlns="http://maven.apache.org/POM/4.0.0"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">
    <modelVersion>4.0.0</modelVersion>
    <artifactId>my-artifact-id</artifactId>
    <dependencies>
        <dependency>
             <groupId>com.altran.general.emf.ecoredoc</groupId>
                <artifactId>ecoredoc-maven-plugin</artifactId>
                </dependency>
                 </dependencies>
</dependencies>
```

```
<build>
  <plugins>
    <plugin>
      <groupId>com.altran.general.emf.ecoredoc</groupId>
      <artifactId>ecoredoc-maven-plugin</artifactId>
      <configuration>
        <resolve>true</resolve>
        <config>
          <renderDefaults>false</renderDefaults>
          <documentTitle>This is the title of my document/documentTitle>
          <ePackages>
            <ePackage>
              <targetEPackage>EPackage1</targetEPackage>
              <eClasses>
                <eClass>
                  <targetEClass>MyEClass</targetEClass>
                  <repeatInherited>false</repeatInherited>
                </eClass>
                <eClass>
                  <targetEClass>Class3</targetEClass>
                  <eAttributes>
                    <eAttribute>
                      <targetEAttribute>specialNumber</targetEAttribute>
                      <render>false</render>
                    </eAttribute>
                  </eAttributes>
                </eClass>
              </eClasses>
              <eEnums>
                <eEnum>
                  <targetEEnum>Enum1</targetEEnum>
                  <renderDefaults>true</renderDefaults>
                </eEnum>
              </eEnums>
            </ePackage>
            <ePackage>
              <targetEPackage>EPackage2</targetEPackage>
              <renderDefaults>true</renderDefaults>
            </ePackage>
          </ePackages>
        </config>
        <inputFiles>
          <inputFile>EPackage1.ecore</inputFile>
          <inputFile>EPackage2.ecore</inputFile>
        </inputFiles>
        <outputFile>output.adoc</outputFile>
      </configuration>
    </plugin>
  </plugins>
```

```
</build>
</project>
```

This example sets the following configuration:

• renderDefaults for all contents: true

• documentTitle: This is the title of my document

repeatInherited for MyEClass: false

• render for specialNumber: false

• renderDefaults for Enum1: true

• renderDefaults for EPackage2: true

## 4. Standalone Command-Line Tool

The standalone command-line tool is available as Maven artifact com.altran.general.emf.ecoredoc:com.altran.general.emf.ecoredoc.standalone.

Use the following command to invoke. Please replace \${ecoredoc-version} with your version of EcoreDoc:

```
java -jar com.altran.general.emf.ecoredoc.standalone-${ecoredoc-version}-jar-with
-dependencies.jar <options>
```

If invoked without options, it will print the following help:

```
Generates reference documentation for ecore models.

The output is inspired by JavaDoc and formatted in AsciiDoctor format.
AsciiDoctor can easily be rendered to HTML, PDF, or Eclipse help.

Usage:

EcoreDocGenerator [parameters] [List of ecore files to generate]

If unspecified, the output file name will be "<firstEcoreFile.ecore>.adoc"

Parameters:

-r,
--resolve: Resolve external references

-o <outputFile>,
--output <outputFile>: Specify output file name.
```

[+|-]subTypes: [Enable|disable] rendering of sub-types

[+|-]superTypes: [Enable|disable] rendering of super-types

## Examples:

EcoreDocGenerator my.ecore Generates the documentation of my.ecore into my.ecore.adoc

EcoreDocGenerator some/path/to/my.ecore other.ecore Generates the documentation of some/path/to/my.ecore and other.ecore into some/path/to/my.ecore.adoc

EcoreDocGenerator -r my.ecore Tries to resolve all external references in my.ecore and generates the documentation of my.ecore and referenced models into my.ecore.adoc

EcoreDocGenerator -defaults +bounds my.ecore Generates the documentation of my.ecore and referenced models into my.ecore.adoc without rendering default values, but still rendering multiplicity bounds

EcoreDocGenerator --positionEClasses 1 --positionEEnums 2 --positionEDataTypes 3 my.ecore

Generates the documentation of my.ecore and referenced models into my.ecore.adoc with all EClasses first, then all EEnums, and finally all EDataTypes

EcoreDocGenerator -o output.adoc my.ecore other.ecore Generates the documentation of my.ecore and other.ecore into output.adoc

## 5. EcoreDoc Metamodel Annotation

Any of the Generator Configuration options can be used as Ecore Annotation. These options will be used by default; any external options take precedence over annotation options.

EcoreDoc will throw an IllegalArgumentException if an EcoreDoc annotation contains an illegal value.

## 5.1. Ecore Annotation

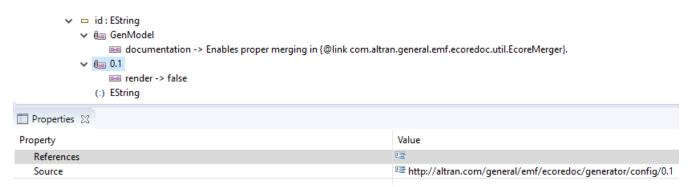

Create an EAnnotation on the annotated element with source

http://altran.com/general/emf/ecoredoc/generator/config/0.1

Within this annotation, create one key/value pair for each option.

The source identifier might change in the future! However, it should be possible to maintain backwards compability.

Example Ecore annotation on EAttribute id (sets render for id to false)

## 5.2. Xcore Annotation

First, register the annotation.

EcoreDoc annotation registration

annotation "http://altran.com/general/emf/ecoredoc/generator/config/0.1" as EcoreDoc

Afterwards, we can use the annotation as usual.

Example Xcore annotation on EAttribute name (sets render for name to false)

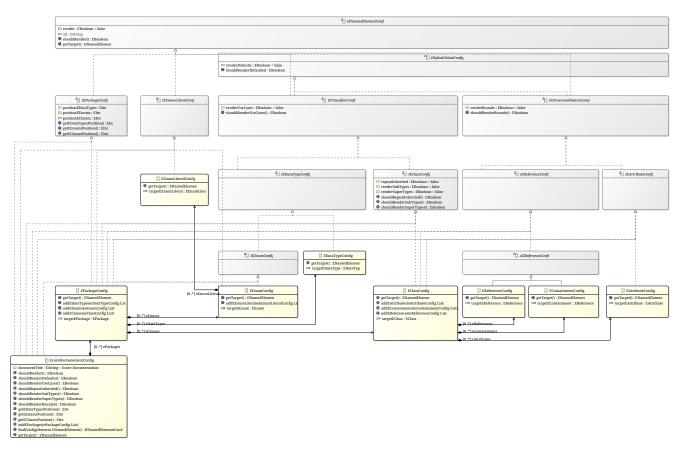

```
@EcoreDoc(
   render="false"
)
String name
```

# 6. Generator Configuration

The generator configuration is an Ecore metamodel, so we obviously use EcoreDoc to create the documentation listed below.

The most important parts are:

- Class EcoreDocGeneratorConfig as model root, also describing the customization hierarchy
- Interface IENamedElementConfig, implemented by all elements
- Interface IDefaultValueConfig, implemented by all elements except Class EEnumLiteralConfig
- Interface IEClassifierConfig
- Interface IEClassConfig
- Interface IEPackageConfig
- Interface IEStructuralFeatureConfig

• config.EcoreDocGeneratorConfig.ePackages

## 6.9. Class EReferenceConfig

#### Super-types

- config.AEReferenceConfig
- config.IDefaultValueConfig
- config.IENamedElementConfig
- config.IEReferenceConfig
- config.IEStructuralFeatureConfig

#### References

Name	Туре	Properties	Description
targetEReference	ecore.EReference	[01]	

#### Used at

• config.EClassConfig.eReferences

## 6.10. Class EcoreDocGeneratorConfig

Root for the detailed EcoreDocGenerator configuration.

The configuration allows to specify configuration options for each element and all its contained elements. It always chooses the most specific configuration setting.

## Example:

EcoreDocGeneratorConfig \* renderDefaults: {unset, defaults to true} \* repeatInherited: false + EPackage1 \* renderDefaults: false + EClass1 + EAttribute1 \* renderDefaults: true + EAttribute2 {no custom config} + EClass2 extends EClass1 + EPackage2 \* repeatInherited: true + EClass3 extends EClass1 + EClass4 + EAttribute3 \* renderDefaults: true \* repeatInherited: false

#### Result:

EPackage1
renderDefaults false repeatInherited false
EClass1
renderDefaults false repeatInherited false
EAttribute1
renderDefaults true repeatInherited false
EAttribute2
renderDefaults false repeatInherited false
EClass2
renderDefaults false repeatInherited false
EPackage2
renderDefaults true repeatInherited true
EClass3

renderDefaults true
repeatInherited true

#### EClass4

renderDefaults true
repeatInherited true

### EAttribute3

renderDefaults true repeatInherited false

## Super-types

- config.IDefaultValueConfig
- config.IEAttributeConfig
- config.IEClassConfig
- config.IEClassifierConfig
- config.IEDataTypeConfig
- config.IEEnumConfig
- config.IEEnumLiteralConfig
- config.IENamedElementConfig
- config.IEPackageConfig
- config.IEReferenceConfig
- config.IEStructuralFeatureConfig

#### Attributes

Name	Туре	Properties	Description
documentTitle	EString	[01]  Default: Ecore Documentation	Title of the generated document.  defaults to Ecore Documentation.

#### **Containments**

Name	Туре	Properties	Description
ePackages	config. EPackageConfig	[0*]	

## 6.11. Interface IDefaultValueConfig

#### Attributes

Name	Туре	<b>Properties</b>	Description
renderDefaults	EBoolean	[01] unsettable	Whether properties should be rendered at their default values.  Example: If EReference.ordered = true (the default value), the ordered property of that EReference will not be rendered if renderDefaults = false.

## 6.12. Interface IEAttributeConfig

## Super-types

- config.IDefaultValueConfig
- config.IENamedElementConfig
- config.IEStructuralFeatureConfig

## 6.13. Interface IEClassConfig

## Super-types

- config.IDefaultValueConfig
- config.IEClassifierConfig
- config.IENamedElementConfig

### Attributes

Name	Туре	Properties	Description
renderSubTypes	EBoolean	[01] unsettable	Whether the list of sub-types should be rendered.
renderSuperTypes	EBoolean	[01] unsettable	Whether the list of super-types should be rendered.

Name	Туре	<b>Properties</b>	Description
repeatInherited	EBoolean	[01] unsettable	Whether inherited features should be repeated.
			Example: EClass1 has an EAttribute name=attr1. EClass2 extends EClass1. If repeatInherited = true for EClass2, attr1 will be listed in the section of EClass1 and EClass2. Otherwise, attr1 will only be listed in the section of EClass1.

## 6.14. Interface IEClassifierConfig

### Super-types

- config.IDefaultValueConfig
- config.IENamedElementConfig

#### Attributes

Name	Туре	Properties	Description
renderUseCases	EBoolean	[01] unsettable	Whether use cases (references to other usages of this element) should be rendered.

## 6.15. Interface IEDataTypeConfig

### Super-types

- config.IDefaultValueConfig
- config.IEClassifierConfig
- config.IENamedElementConfig

## 6.16. Interface IEEnumConfig

### Super-types

- config.IDefaultValueConfig
- config.IEClassifierConfig
- config.IEDataTypeConfig
- config.IENamedElementConfig

## 6.17. Interface IEEnumLiteralConfig

## Super-types

• config.IENamedElementConfig

## 6.18. Interface IENamedElementConfig

#### Attributes

Name	Туре	Properties	Description
render	EBoolean	[01] unsettable	Whether this element should be rendered at all.

## 6.19. Interface IEPackageConfig

### Super-types

• config.IENamedElementConfig

#### Attributes

Name	Туре	Properties	Description
positionEClasses	EInt	[01] unsettable	Rendering position of all EClasses within an EPackage.
positionEDataTypes	EInt	[01] unsettable	Rendering position of all EDataTypes within an EPackage.
positionEEnums	EInt	[01] unsettable	Rendering position of all EEnums within an EPackage.

# 6.20. Interface IEReferenceConfig

### Super-types

- config.IDefaultValueConfig
- config.IENamedElementConfig
- config.IEStructuralFeatureConfig

## 6.21. Interface IEStructuralFeatureConfig

### Super-types

- config.IDefaultValueConfig
- config.IENamedElementConfig

#### Attributes

Name	Туре	Properties	Description
renderBounds	EBoolean	[01] unsettable	Whether multiplicity bounds should be rendered, even if they are at their default values and renderDefaults = false.

## 7. Versions

This asset in version 0.7.0-SNAPSHOT was developed using the following components and versions.

**Eclipse** 

4.7.3a (Oxygen 3a)

**Google Guava** 

19.0

**Apache Commons Lang3** 

3.4

**Apache Commons IO** 

2.2

**Apache Maven** 

3.3.9

**Eclipse Ecore** 

2.12.0

**Eclipse Xcore** 

1.3.1

**Eclipse Tycho** 

1.2.0

# 8. Known Issues

- If HTML is used in Ecore documentation, the PDF rendering can be faulty (Issue #12)
- EOperations, EParameters, EAnnotations are missing from the documentation (Issue #13, Issue #15)
